

Supervisor Process Flow

1. Start & Authentication

The process begins when the Supervisor accesses the system and proceeds to the **Login** screen. The Supervisor enters valid credentials to authenticate access. Upon successful login, the system initializes the user session, loads role-based permissions, and prepares personalized data relevant to the Supervisor's scope of responsibility.

2. AI Assistant Initialization (Optional)

After login, an **AI Assistant pop-up** may appear. This assistant provides quick guidance, system tips, reminders, or alerts related to pending approvals, urgent work orders, or system updates. The Supervisor may choose to interact with the assistant or close it to continue.

3. Dashboard (Home Screen)

The Supervisor is directed to the **Dashboard**, which serves as the central control panel of the system. It displays: - Project summary cards - Key performance indicators (KPIs) - Status counts for work orders, requests, and approvals - Recent activity and alerts

This view provides an immediate overview of operational status and priorities.

4. Project Management

From the dashboard, the Supervisor can access **Projects**. This section allows the Supervisor to: - View all assigned or supervised projects - Check project progress, timelines, and statuses - Review associated work orders and resources - Identify delays, risks, or issues requiring action

5. Work Orders & Service Requests

The Supervisor navigates to **Work Orders / Service Requests**, where they can: - View new, ongoing, and completed requests - Distinguish between service types (e.g., test, defect repair, request service) - Review work details, assigned vendors or technicians, and schedules - Approve, reject, or return work orders for revision

This step ensures operational tasks are properly monitored and controlled.

6. Review & Approval Process

For items requiring authorization, the Supervisor performs **Review and Approval** actions: - Validate request details and supporting documents - Check compliance with policies, contracts, and scope - Approve, reject, or request additional information

Approved items proceed to execution, while rejected or returned items are routed back to the requester with remarks.

7. Monitoring & Tracking

Once work is in progress, the Supervisor continuously **monitors execution** by: - Tracking status updates and milestones - Reviewing progress reports and logs - Ensuring tasks meet quality, safety, and timeline requirements

Any issues identified can trigger corrective actions or escalations.

8. Notifications & Alerts

Throughout the process, the system sends **Notifications** to keep the Supervisor informed of: - New requests or work orders - Pending approvals - Status changes and completions - System or administrative alerts

Notifications ensure timely responses and reduce operational delays.

9. Reports & Logs

The Supervisor may access **Reports and Logs** to: - Review historical data and performance metrics - Analyze completed work and approval histories - Support audits, evaluations, and decision-making

This step helps maintain transparency and accountability.

10. Admin Panel (If Authorized)

If the Supervisor has administrative privileges, they can access the **Admin Panel** to: - Manage users and role assignments - Configure system settings relevant to supervision - Review feedback, system logs, and configurations

11. Feedback & Continuous Improvement

The Supervisor can submit or review **Feedback and Logs** to help improve system processes, workflows, and overall efficiency.

12. Logout / End Session

After completing tasks, the Supervisor logs out of the system. The session is securely terminated, ensuring data integrity and system security.
